

electronic desk calculator with IC

e people call it
 biggest office
 breakthrough of the century.
 Call it the Sharp Compet 32.

Closing time and a few minutes ago
 she was asked her to calculate an extraordinarily
 complicated percentage figure. Without turning

a hair, she has pulled out her new space-age,
 Sharp electronic desk calculator, the Compet 32,
 and set to work.

Operating through newly developed Integrated
 Circuits (replacing multiple transistors and parts
 in a minimum space), this feather-light calculator,
 with the built-in memory bank, can perform
 a wide variety of sophisticated calculations of up
 to 16 digits* and 8 decimal places in a space half

the size of conventional electronic calculators.
 By closing time, we can be sure, her boss will have
 the required figure on his desk while she, as crisp
 and cool as ever, can be on her way to meet,
 perhaps, that certain young man in her life.

*For a more handy and economical version, the 12-digit
 Compet 17 is available.
